

## MCULE - CLICK COLLECTION

We have created two sets from Mcule's collection of more than 100 suppliers and 40 million compounds, one for azides and another for terminal acetylenes:

Both building block sets have been divided into two subsets: *in-stock* and *virtual* ones. The in-stock set has lower prices and faster delivery times but the virtual sets are great extensions with indispensably more compounds.

No further restrictions were made. The downloadable *ZIP* file contains 4 *SMILES* files.

If you would prefer other molecular format or further filtering - feel free to contact us at [support@mcule.com](mailto:support@mcule.com).

### **Our professional laboratory services include**

- Transferring samples to plates/vials as solid or DMSO solution
- Solubility characterization
- Temperature controlled shipping
- Quality control via LC-MS & NMR (on demand)

### **Please also reach out to our cheminformatics experts with projects related to**

- Screening library building/expansion
- Generation of synthetically feasible chemical spaces based on your building blocks
- Filtering the Mcycle database based on your criteria
